

ASTELL SCIENTIFIC QUALITY MANUAL

QUALITY POLICY

BS EN ISO/IEC 17025:2005

Astell Scientific are committed to good professional practice and to the quality of its calibration in servicing its clients. To achieve this objective, Astell Scientific has established and will maintain an effective Quality Management System, planned and developed to meet the requirements of EN ISO/IEC 17025:2005.

The Quality Assurance Manual and Procedures describe how the system is operated and adherence to these procedures, by all the company's management and personnel, ensures that the company's quality objectives and continual improvement are achieved.

The Board of Directors has delegated the responsibility of operating and maintaining the Quality Policy to the Quality Manager whilst recognising that ultimately, the responsibility of maintaining quality standards and supporting the Quality Management System, rests with them.

It is also the responsibility of all personnel concerned with validation/calibration activities within Astell Scientific to familiarise themselves with the Quality Documentation and implement the policies and procedures in their work.

Signed

Executive Chairman

These Quality Policies are regularly reviewed in order to ensure their continuing suitability.
